

Project Grading

Project title:

Team members:

Grading factors:

- Complexity of the project
- Design: Amount of wide parallelism? Amount of pipeline parallelism? Elegant? Innovative?
- Demonstration, does it work?
 - Simulation?
 - On ZedBoard?
- Speedup
 - Computation only
 - Data transfer and computation
- Use other features (i.e., Zynq I/O)?
- Amount of parameterization?
- Data used to test/demonstrate the design (i.e., “toy” data or “real-world” data)
- Any other features? Comments?
